--------------	-------------	-----------------	----------------

FRAGMENT_OFFSET	uint13	The offset, in 8-octet units, of the data following this header, relative to the start of the Fragmentable Part of the original packet.	
M_FLAG	bool	1 = more fragments; 0 = last fragment.	
IDENTIFICATION	uint32_t	In order to send a packet that is too large to fit in the MTU of the path to its destination, a source node may divide the packet into fragments and send each fragment as a separate packet, to be reassembled at the receiver. For every packet that is to be fragmented, the source node generates an Identification value. The Identification must be different than that of any other fragmented packet sent recently* with the same Source Address and Destination Address
